- 6) ☐ Other: _____.

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a biopolymer marker, classified in class 530, subclass 300, for example.
- II. Claims 10-28, drawn to a diagnostic assay kit, classified in class 436, subclass 518, for example.
- III. Claim 29, drawn to a polyclonal antibody, classified in class 436, subclass 547, for example.
- IV. Claims 30-32, drawn to a monoclonal antibody, classified in class 435, subclass 70.21, for example.
- V. Claims 33-34, drawn to method for identifying a disease, classified in class 436, subclass 501, for example.
- VI. Claim 35, drawn to a method for regulating disease, classified in class 436, subclass 55, for example.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II-VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions, different effects and have different modes of operation. The biopolymer marker of group I is not required in the kit of group II. The antibodies of group III and IV are not required in the kit of group II, and these antibodies are different from the biopolymer maker of group I and from each other because they have different biological, chemical and physical characteristics.

Art Unit: 1641

Inventions I-IV and V-VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another material and vice versa, the product as claimed can be used in a materially different process. The biopolymer marker can be used to generate antibodies; the kit as claimed can be used to detect the presence or absence of the marker instead of a method for identifying a disease or for regulating the disease.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Groups II-VI, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
